When you can't afford to compromise on safety, choose fire-safe VRS

Key benefits:

- Vapour is released gradually, thereby giving an early warning signal unlike other hoses in order to prevent sudden catastrophic failure
- Cutting edge technology based on extensive research and development as a solution to Formula One safety issues
- Can be used in a wide range of end use applications for the transfer of fuel, chemicals and vapour
- Pioneering product innovation ensures maximum protection for your assets whilst transferring fuel and other hazardous substances
- Composite hoses also have major advantages in terms of flexibility, weight, chemical resistance and price over other forms of flexible hose

fire-safe

Dantec is a world leader in composite hose technology, applying more than

and Industrial applications including fluid transfer of petroleum and chemicals,

The Ultimate in Fire Safe fuel and chemical transfer hose technology

How it works

fire-safe composite hose utilises a series of non-asbestos barriers to conductive and radiative heat to achieve outstanding fire retardant ability. With **fire-safe** hose, after thirty minutes of severe fire attack, the hose carcass is still intact and capable of holding product. From a fire fighting and personnel point of view, this is a critical factor.

A severe situation is where hot, vapourising fuel is violently deposited onto a running or spillage fire; a situation made worse when water is involved, often resulting in catastrophic effects.

Even after loss of integrity, **fire-safe** hose will not fail catastrophically. Instead it will gradually burn off the product as it presents itself to atmosphere. In addition to testing by Dantec at our Moreton factory, the **fire-safe** hose has been independently tested by the British Government Department of the Environment, Fire Research Station and also the Swedish Fire Service.
